-The design quality of the game screens can be increased. Right now when I am playing in a tab the quality of the design decreases.

-Too much distractions in the screen, remove the unnecessary things.

-Write the dimensions in correct form with units.

-The instruction is overlapping and its designing is not good.

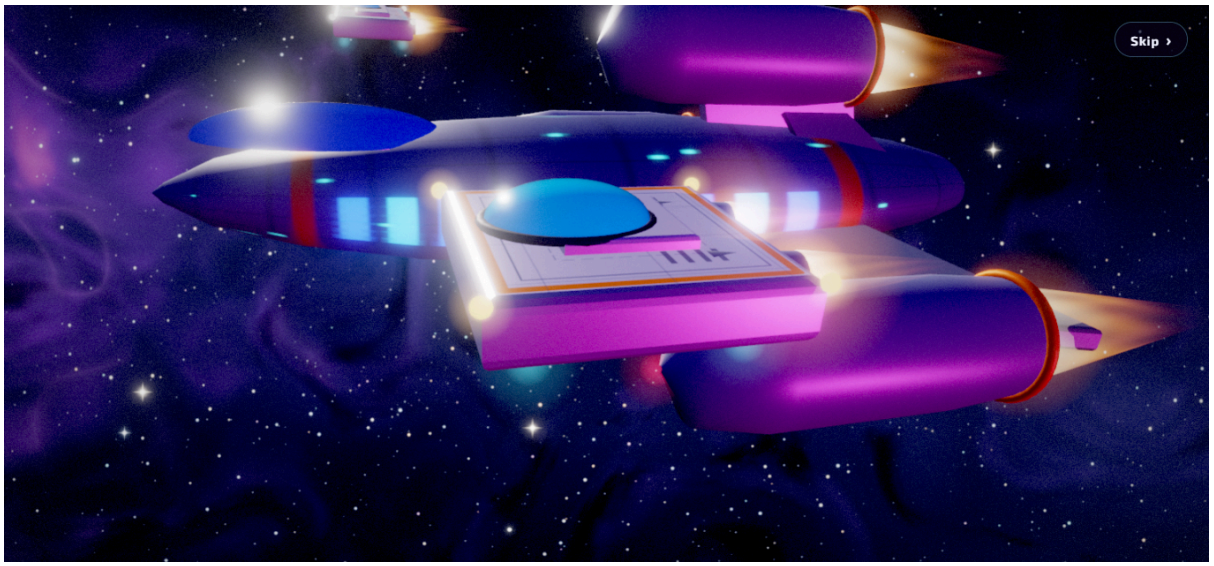

-Write the area within the landing zones.

-No need to show the formula for area and remove the shapes from the screen at the top.

-No need to write ‘side’, ‘length’, ‘breadth’ etc.

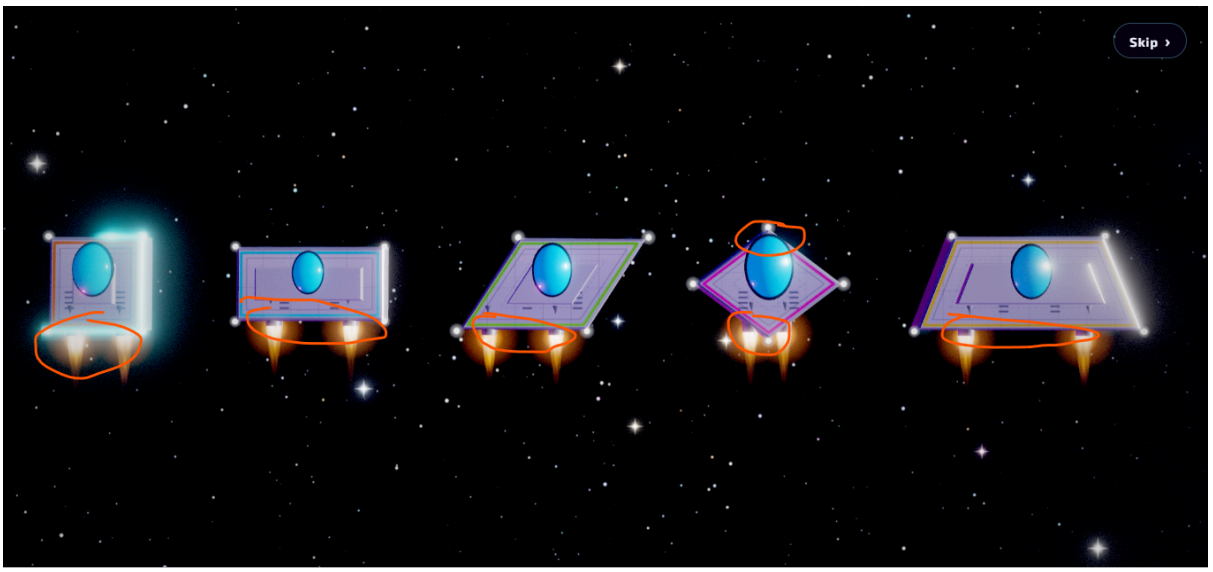

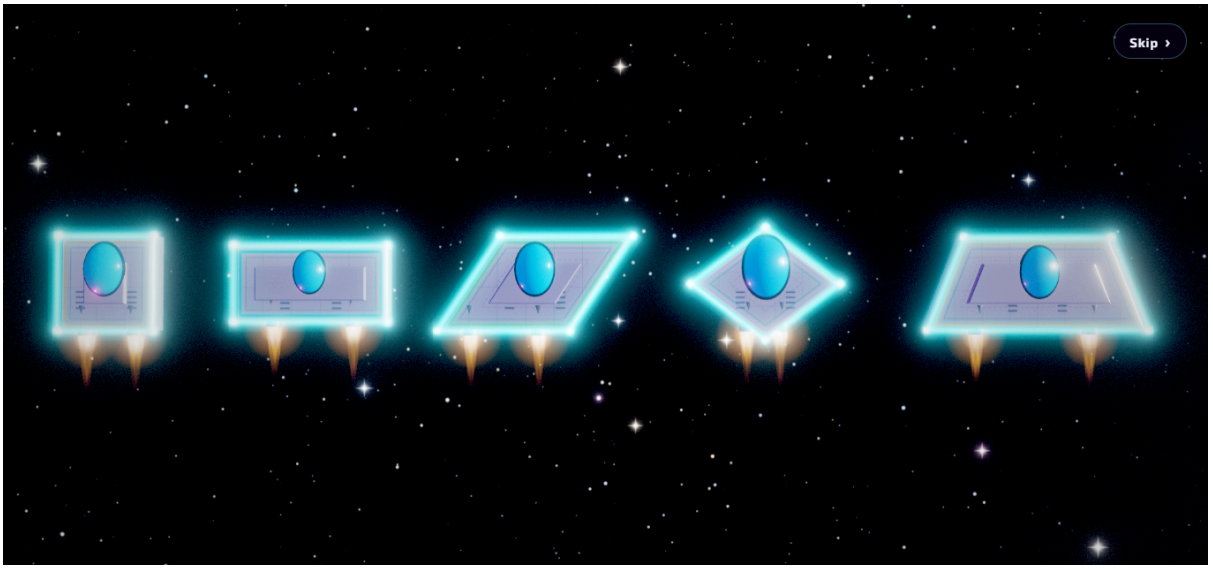

Check the quality of these screens.

Welcome screen: This is hiding, fix that.

The jet exhaust should be embedded within the spacecraft. Do not show them outside.

The glowing light is spreading too much. Keep the glowing light without scattered. So, that it should feel like it is a side of the shape, and keep it little thin.

Remove the shapes icon from the top of the screen.

Remove the area formula from the screen.

Zoom out the landing zones and spacecraft, so that user can focus more on it.

The dimensions of the spacecraft: Show it like “5 units” and “5 units”.

Show the dimensions only when the spacecraft is not moving, when moving no need to show the dimensions.

The area written of the landing zones should be within the land not outside.
