

The highlighted piece should not inside the exhaust jet remove that.

The exhaust fire should be visible in the spacecraft. You have removed the exhaust jet that is fine, but fire should not be removed. So, add it.

The background music in the learning section looking weird. Change that.

We don’t need to write this statement “Its area is side times side”. If first time doing wrong give a hint “Look closely! The spacecraft is square shaped.”

If the user landed on wrong zone, then give feedback and then shuffle the landing zones, I mean we have to change the positions of each square shaped then ask again to where to land.

If again wrongly selected then, show the hint “Its area is side times side.”

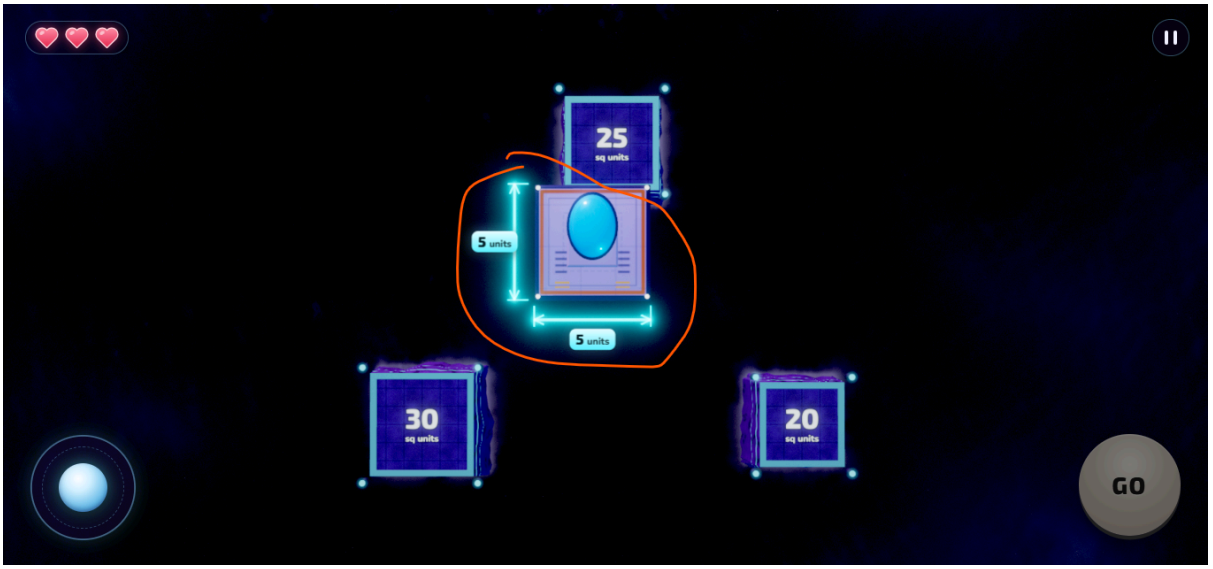

If again wrongly selected show the hint “Here, multiply 5 with 5.”

If again wrongly selected, then make that zone green and highlight it, so the user must know this is the correct landing zone.

For each time wrongly selected landing zones shuffle the landing zones, so that user cant make guesses. (Note we don’t have to change the numbers just positions when wrongly selected.)

Make sure the text should not overlap with the assets (landing zones, or spacecraft.)

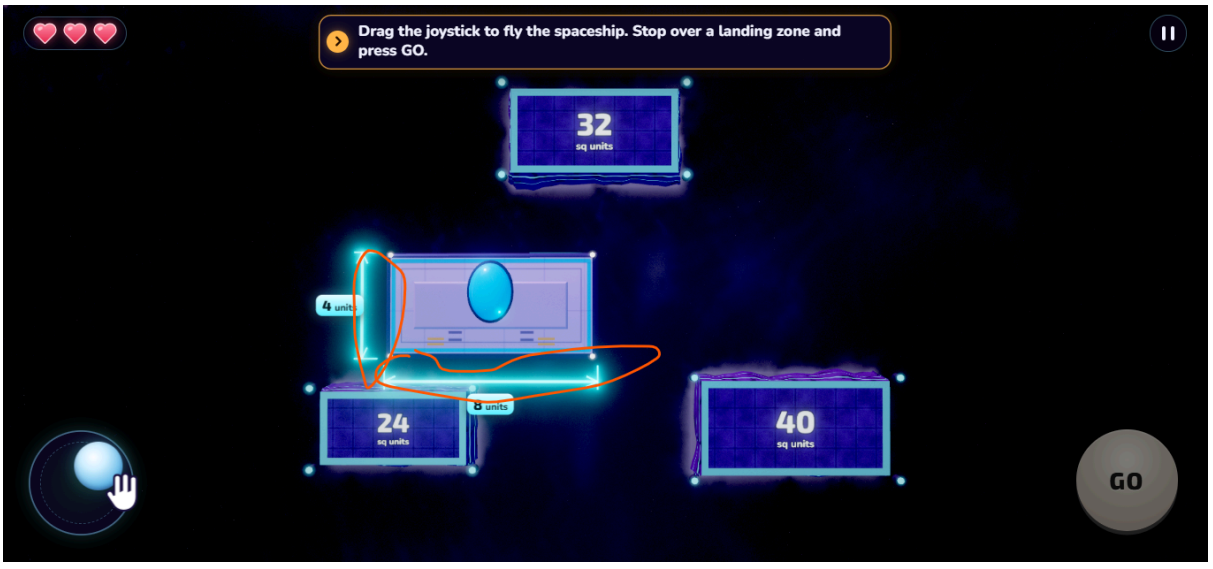

THIS IS FOR ALL THE SHAPES SPACECRAFT.

In the spacecraft the fire coming out is missing, add them.

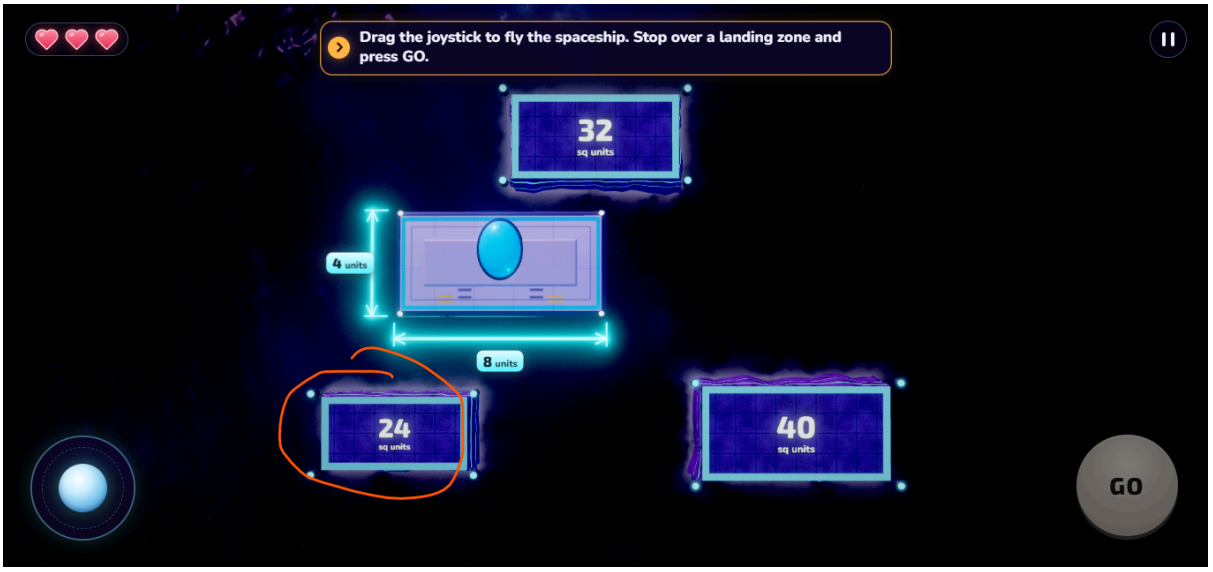

Also, when the user drag the joystick to the right, show the fire coming out from the left side and vice-versa. When the user drag the joystick up, show the fire coming out from down and vice-versa.

Make sure the text should not overlap with the assets (landing zones, or spacecraft.)

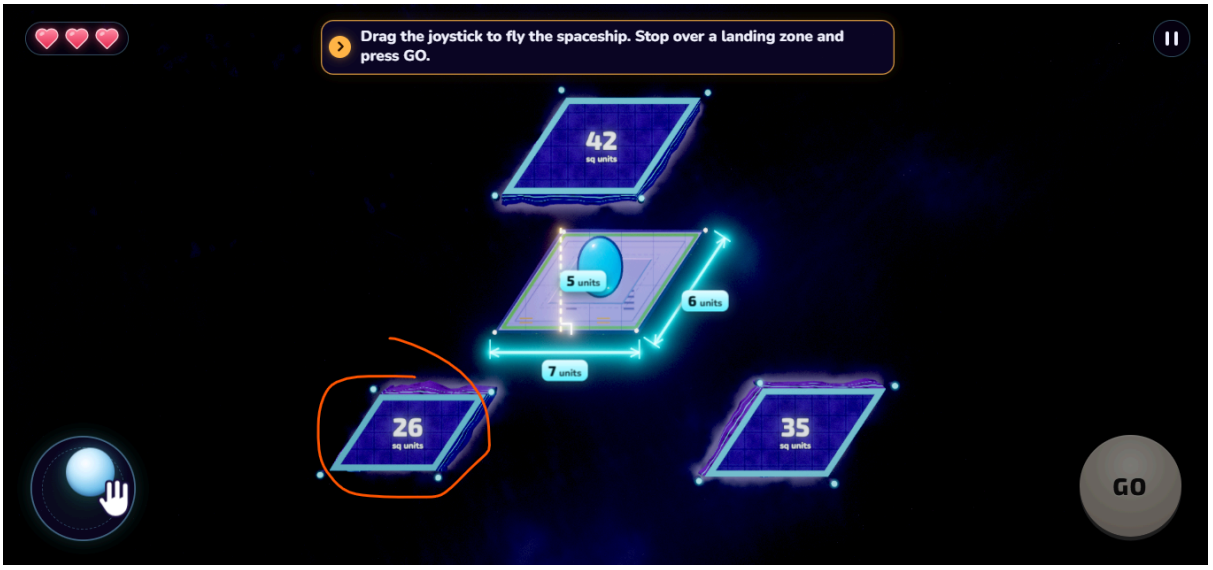

The glowing effect is too much for showing labelling, reduce that.

Make the text “units” little bigger font size.

Change this area with “36 sq. units” instead of ’24 sq. units’. So, that user do not solve it by guessing.

Make it “30 sq units” instead of “26 sq units”.

This is looking crowded.

The spacecraft in the middle with dimensions looking little crowded.

Adjust the dimensions with the spacecraft, so it does not feel weird looking.

Last screen should be showing this should be in the water only, not in flying.
